Subject Index for Volume 10 will appear in the December issue as part of a cumulative index for the year 1974.

## Information for Authors

The *Journal of Solid State Chemistry* publishes manuscripts on chemical, structural, thermodynamic, electronic, magnetic and optical properties and processes in solids. Typical studies encompass crystal chemistry, phase equilibria and transformations, order-disorder phenomena, diffusion, high-temperature and high-pressure processes, crystal growth mechanisms, epitaxy, bonding in solids, reactions at surfaces, statistical mechanics of defect interactions. Both theoretical and experimental papers are welcome. On occasion a critical review is sought in selected rapidly developing fields.

English, French, and German are the official languages of the Journal. Papers in Russian are acceptable, but will be translated into English before publication.

Manuscripts may be submitted to any one of the three editors (R. E. Hughes, Department of Chemistry, Cornell University, Ithaca, NY 14850; M. J. Sienko, Department of Chemistry, Cornell University, Ithaca, NY 14850; R. Vold, Division of Engineering, Brown University, Providence, RI 02912) or through any member of the Editorial Advisory Board.

Manuscripts should be submitted in triplicate—double-spaced on one side of  $21.5 \times 28$  cm paper. Headings of sections should be typed in capital letters and centered on the page.

Each page of the manuscript should be numbered. The first page should contain the article title, author's name, and affiliation. At the bottom of this page should appear any footnotes to the title (indicated by superscript\*, †). The second page should contain an abstract (50–150 words) which should be suitable for use in *Chemical Abstracts*.

The American Chemical Society's *Handbook for Authors* should be followed regarding matters of style and abbreviations of units. The *Style Manual* of the American Institute of Physics is also an acceptable guide.

**Tables.** Tables should be numbered with Roman numerals in a sequence corresponding to the order of citation in the text. Tables larger than two manuscript pages will be reproduced by photoengraving; therefore all extended tables should be prepared carefully in clear sharp type. Errors in such tables cannot be corrected in proof. When appropriate, the tables should be designed to fit the Journal page after photoreduction. Glossy prints of these reduced tables are desirable. Footnotes to tables are to be placed directly below the table and should be indicated by superscript, lower-case italic letters(<sup>a</sup>, <sup>b</sup>, <sup>c</sup>).

**Special Tables.** In lieu of publication, it may be necessary to deposit unusually long tables with the National Library Publications Service (NAPS). In particular, structure factor tables must be deposited if, in a clear, proportioned, photoreduced format, they would occupy more than one Journal page (this corresponds to a limit of about  $1000F_0$  and  $F_0$ ). In any case, three copies of all tables must be submitted with the manuscript.

For material to be deposited, a deposit fee of \$15.00 for up to 98 pages of standard-size or 48 pages of oversized deposited material is to be paid by the authors to NAPS. Appropriate transmittal forms to accompany oversized material will be supplied to the authors by the editors at a time a paper is accepted for publication.

The following footnote (wherein missing numbers are to be inserted by the author in page proof) should be included to reference deposited material:

See NAPS document No. .... for .... pages of supplementary material. Order from ASIS/NAPS, c/o Microfiche Publications, 305 E. 46th St., New York, N.Y. 10017. Remit in advance for each NAPS accession number \$1.50 for microfiche or \$5.00 for photocopies up to 30 pages, 15c for additional page. Make checks payable to Microfiche Publications.

**Figures.** Authors should send glossy prints or original black ink drawings, no larger than  $21.5 \times 28$  cm. It is important that drawings be lettered with a lettering set and planned to fit the proportion of the printed page (20 cm). Background grids should not be included. The caption of each axis should be lettered parallel to the axis. Lettering on the original should be large enough to be legible after a reduction of 50%. For half-tone reproductions, glossy, high-contrast, black and white prints should be submitted. Each figure should be identified in a margin with the author's name and figure number. Figures are to be cited in text by consecutive Arabic numerals. Figure captions should be typed as a list on a separate page.

**Equations.** Equations should be typewritten or clearly handwritten, with an Arabic number if necessary for reference placed in parentheses to the right of the equation. Reference to equations should use the form "Eq.(3)."

**Footnotes.** Footnotes to the text should be indicated by consecutive superscript numbers and listed on a separate page at the end of the article.

**References.** References should be cited in the text by consecutive underlined numbers in parentheses. References must appear on a separate sheet, listed in numerical order—i.e., in accordance with order of citation in text. After the reference number, the author's initials, last name, journal name, volume, initial page number, and year (in parentheses) should be listed in that order. Abbreviations for journal names should follow the list in *Chemical Abstracts' Service Source Index*. For book references, give the author's name, name of book (in quotes), editor's name (if any), edition (if other than the first), chapter, or page number, publisher's name, and year of publication.

**Proofs.** Unfolioed page proofs will be sent to the author with order forms. There is no page charge.
